## Termites

### What are termites?

Termites are wood destroying insects that scientists believe have been around for over 250 million years! Most termites feed on cellulose from wood or wood products. They are social insects that live in a colony in the ground or in wood. One of the tell tale signs of their presence is the mud tubes they build to gain access to wood.

### Are they dangerous?

The greatest concern is structural damage.

### How do you get rid of termites?

Termites may be difficult to control that's why our service includes the necessary products and follow up visits for one fee. Our treatment methods consist of the following:

**Initial Service-** The Schendel Termite Elimination and Protection program (S.T.E.P.) is a comprehensive 5 step service that includes a detailed inspection of the interior and exterior of your home including your surrounding property, then a targeted treatment of all the areas where termite activity is present using all our termite resources to prevent these destructive pests including the highly effective Advance Termite Bait System. The S.T.E.P. program also gets rid of termite colonies on your property as part of our initial service.

**Follow Up-** Schendel Pest Services will continue to monitor the Advance Termite Bait Systems four times each year and will place bait in any station if termite activity is found. Quarterly written updates documenting any activity found are provided and all Schendel Premium Care customers enjoy the benefit of our PestZero Guarantee.

### Can I do it myself?

Due to the complexity of treatment and the time required, termites are generally not a pest many people have success in eradicating. Beware when purchasing pesticides and other products online as many are not effective. Pesticides can be harmful to people and pets if they are misused or mixed improperly.

### How soon can you get here?

Schendel is 100% committed helping you ASAP. In most cases, we can respond the same or very next day.

### Is the treatment safe?

Schendel uses the least amount of material as possible while still resolving the problem. We utilize natural products, baits, and mechanical means as a form of treatment as much as possible. When conventional materials are required, we follow very stringent guidelines for the use of the product so that it poses no threat to people, pets or plants. All

**No Matter what's bugging you ... Schendelize 'em!**
